

Data Translation Services helps you improve the inventory gathering, storing and reporting processes within LANDesk.

You can structure your LANDesk Inventory data how YOU want it, by adding, removing, and reorganizing data fields that are related to each other in ways that you mandate.

With **Data Translation Services** your LANDesk Management Suite data becomes Management Ready INFORMATION!

Data Translation Services 9.0™

Business to Business Connector

- Import purchase information to create asset records in LANDesk or any other system
- Create asset inventory for PCs, Laptops and Servers
- Record non-PC assets with optional “Asset Control” module

Data Consolidation

- Map asset and serial number fields for consistency.
- Dynamically locate all vendor serial number and asset tags.
- Remap any field to a constant known attribute location.
- Make your asset tags consistent regardless of the vendor.

Data Extraction

- Extract data to create easy-to-use custom fields.
- Export data to any other source such as CMDB's and even Active Directory!

Data Integration

- (NEW) Licensed Software Analytics produces a per machine EULA aware list of software that requires a license ignoring all other software components.
- Integrate other enterprise application data, asset data, service desk data, and Active Directory information.
- Automatically Import purchasing and warranty information directly from the PC manufacturer's website.
- Export LANDesk data into your help desk application.
- Export LANDesk data into your asset tracking system.
- Bulk import feature allows rapid data input via the console without needing custom data forms.
